Life is but an empty dream!-

For the soul is dead that slumbers,

- E. Hair goes on growing after a person dies because the cells of the body go on working until they have exhausted their fuel supply.

The hair follicle is composed of two layers—an outer layer of cells forming the outer root sheath and an inner layer of horny, fibrous oblong cells. The hair grows upwards from the bottom of the follicle by multiplication of the soft cells, which becomes elongated and pigmented to form the fiber-like substance of the hair shaft.

The soft cells at the base of the follicle need the nourishment brought to them and all the other cells of the body by the bloodstream.

F. *The concepts of Epicureanism are largely known to us through Lucretius, rather than Epicurus. The latter, born an Athenian citizen in Samos in 341, founded his school in his garden, a symbol of retirement from the world, in 306 and died in 270 B.C.*

For the Epicurean, the universe was chaotic and anarchic, composed of atoms and the void. All knowledge was acquired by sense perception; observation was therefore essential to understanding. There were an infinite number of worlds, formed by the chance combination of atoms in infinite space. The gods, unconcerned about human affairs, lived in the void between the different worlds. They were not to be regarded superstitiously or feared, only to be envied.

Man himself was made up of body and soul. Death was not to be feared. There was no such thing as immortality; after death, atoms of the soul were scattered. The aim of life therefore was pleasure, the pursuit of which brought about happiness, the final end. The injunction to follow nature meant, seek pleasure. Everything was desirable insofar as it led to pleasure, but above all, the aim was absence of pain and the achievement of peace of mind. This would be obtained personally by self-control, the mastery and limitation of desires as far as possible to those that were strictly necessary. Also, it implied limitation of social relationships - "live unknown"- refusal to be involved in family or political affairs, skepticism toward religion, which the Epicureans considered largely superstition.

G. *What is the happy life? Self-sufficiency and abiding tranquility. This is the gift of greatness of soul, the gift of constancy which perseveres in a course judged right. How can these attitudes be attained? By surveying truth in its entirety, by safeguarding in every action order, measure, decorum, a will that is without malice and benign, focused undeviatingly upon reason, once amiable and admirable. The wise man's soul should have the quality of a god's. What can a man desire if he possesses everything that is honorable? H. ***Love in the Open Hand***

by Edna St. Vincent Millay

*Not in a silver casket cool with pearls,
Or rich with red corundum or with blue,
Locked, and the key withheld, as other girls
Have given their loves, I give my love to you:*

*Not in a lover's knot, not in a ring
Worked in such fashion, and the legend plain-
Semper Fidelis, where a secret spring
Kennels a drop of mischief in the brain:*

*Love in the open hand, nothing but that,
Ungemmed, unhidden, wishing not to hurt,
As one should bring you cowslips in a hat
Swung from the hand, or apples in her skirt,

I. *One day, the guru and his young disciples were seated on the bank of the river, talking and praying together. An uprooted tree came floating down the river and caught in the bank just in front of them. Caught in the branches of the tree was a scorpion which must have been trapped on the tree when it was uprooted by the floodwater upstream. The guru knew that, inevitably, the scorpion would fall from the tree and be drowned in the river. So he reached his hand out to take the scorpion from the tree and to put it safely on land. But as he reached out to rescue the scorpion, it stung his hand, and the guru had to take his hand away in pain.*

After a moment, the guru reached out to rescue the scorpion again, and the scorpion stung him again. The guru kept trying to save the scorpion and the scorpion kept stinging him until his hand was red and swollen in pain.

Finally, one of the young disciples could control himself no longer and he burst out: "Master, why do you keep trying to rescue that foolish scorpion that doesn't even want to be saved?" The guru looked very patiently at the impetuous young disciple and said: "Should I be untrue to my nature which is to be compassionate just because this scorpion is being true to its nature to sting?"

These coronary arteries can become blocked by the deposition of fatty material (including cholesterol), connective tissue fibers, and calcium deposited in the vessel walls. If the blockage is severe, numerous heart muscle cells become oxygen starved and the heart stops. In less severe cases, only part of the heart muscle dies as a result of the blockage. The dead muscle is replaced by scar tissue and the heart continues to function, though less efficiently. Diet, stress,*

smoking, and alcohol all contribute to the problem of heart attacks. Interestingly, although fats in the diet are often blamed for heart attacks, about 70% of the heart's energy requirement normally is derived from oxidation of fatty acids.

Cancerous tumors can occur in almost any tissue of the body, although some are more often affected than others. Three general kinds of cancer, named after the tissues most often affected, are recognized: carcinomas (from karkinoma, the Greek word for cancer), which commonly involve epithelial tissue (epidermis and lining membranes); sarcomas (Greek sarkoma, "flesh"), which affect mainly connective tissues, including bone; and leukemias, which start in the bone marrow and lymphatic tissues and spread in the blood and lymph.* From: Biology

At the wound site, blood platelets swell and burst, releasing chemicals that cause the arteries to constrict and thus slow the loss of blood. The platelets also initiate a process that results in activation of prothrombin activator, an enzyme that converts a blood-protein constituent called prothrombin to thrombin. In the presence of calcium ions, thrombin catalyzes the conversion of another blood-protein component, fibrinogen, into fibrin threads. The fibrin threads form a fine meshwork in the blood and together with trapped cells and other blood particles make a clot and block further the escape of blood from the wound. In the hereditary disease*

hemophilia, there is a deficiency in the factors that activate the formation of prothrombin activator; the hemophiliac lacks the ability to form clots at the point of wounding and may bleed to death from an apparently minor cut or abrasion.

B. Kabataan: Pag-aso ng Bayan

"Ang kabataan ang pag-aso ng bayan." Ito ang sinabi ni Dr. Jose Rizal, ang ating pambansang bayani. Malaki ang pagtitiwala niya sa angking talino at kakayahang ng mga kabataan. Naniniwala siya na mahahango ang bansang Pilipinas sa tiyak na kasawian kung sila, ang mga kabataan, ang magkakaroon ng tunay na pag-ibig sa bayan.

Maraming maitutulong ang mga kabataan sa pagpapaunlad ng bansa. Maaaring simulan nila ang pagmamalasakit sa kani-kanilang mga pamayanahan. Sa mga proyektong inilulunsad ng pamahalaan, may mga gawaing pangkabataan katulad ng pagpapaganda ng kapaligiran at paglilinis ng mga sari-sariling bakuran. Makatutulong din ang mga kabataan sa pagpapanatili ng katahimikan at kapayapaan sa mga pamayanahan. Ngunit, bakit tila yata ang mga kabataang ito ang bibigo sa dakilang pangarap ng yumaong bayani? Bakit tila nais nilang sikilin ang damdaming makabayang siyang sandata sa pagtatanggol sa Inang Bayan?

Mula sa Likha IV nina Samonte, et al.

Maraming klase ang Santan - may puti, pula, dilaw at malaginto. Iba-iba rin ang laki - may mahaba pero makitid ang mga dahon, samantalang ang iba ay mas malapad at maikli. May mabangong Santan at mayroon ding walang amoy. Ang Ixora coccinea L. ay galing sa India. Mahalaga ito dahil sa maaaring ipanggamot. Ang solusyon mula sa pinakulong ugat ay maaaring purga. Maaaring ipainom sa nagduduwal at sa sinisinok. Nakatutulong ito sa pagkakaroon ng gana sa pagkain. Mabuti rin ito sa di dinadatnan at nagtatae. Para sa makating lalamunan, maaaring ipangmumog ito. Iyong binayong sariwang sanga nito ay mainam na gamot at pantapal sa pilay, mga maysakit na bahagi ng katawan, eksema at sa mga galis. Mabisang gamot ang Santan.*

Study the pyramid on the left and in particular, the lines which appear in each hexagon. Moving up the pyramid from the bottom row, these lines appear in each hexagon according to a set rule, depending on the lines which appear in the two hexagons directly below it. Which of **a**, **b**, **c**, **d**, below, should replace the hexagon with the question mark at the top of the pyramid?
